Project Title: Jean-Michel Basquiat Website

1. **Project overview**
   The goal of this website is mostly informational and to provide a clean website, almost like a portfolio website showing Jean-Michel Basquiat's career as an artist. I want to incorporate his art style while keeping the website still clean and focused on his work, by finding a good balance between his graffiti-like style and a clean layout.

2. Resources
   The wikipedia page is https://en.wikipedia.org/wiki/Jean-Michel_Basquiat. There is also a page with a list of his artworks: https://en.wikipedia.org/wiki/List_of_paintings_by_Jean-Michel_Basquiat. I may refer to this page for the selected works page as well. There are many images on Google and Museum websites where I can get images of his works.

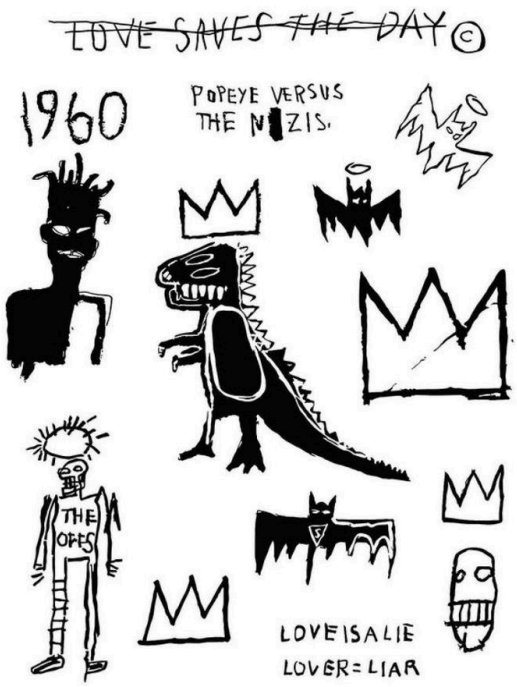

3. Audience
   The intended audience is anyone interested in learning about Basquiat and his works. I want to make it as if it's a portfolio website for Jean-Michel Basquiat. I want this website to be informational enough that someone doing research on Basquiat can get information about him from this one website.

4. Message
   It will introduce Jean-Michel Basquiat's artistic career and explore the meaning behind his work. I will also focus on his distinctive visual language and how he paints themes like identity, race, power, and society. I hope the website can help viewers understand and appreciate his work through the website.

5. Tone
   Since I want to make this a clean website, like an art portfolio. I will keep most of the website clean but I still want to incorporate the graffiti-like and collage-like style of his work in the website. For example, the landing page could resemble his style to capture people's attention.

6. Visual style
   I want to visually show the collage-like style that he uses in his artworks. He also uses lots of symbols and icons that I could use as the logo for the website.
